

On Ramp

OnRamp provides the easiest and least expensive solution to a professional email and your business card on the internet.

OnRamp provides the easiest and least expensive solution to providing you a professional image.

If you are just looking to have a web site with your contact information and a professional email address (not "name19154@ispCo.net"), then this is the solution for you.

OnRamp includes:

- Domain Name (e.g. www.yourCompany.com)
- 1 email address (e.g. yourName@yourCompany.com)
- 1 page web page created for you based on one of our business card templates

Your business card on the internet, with a professional email address for your customers and prospects to contact you.

After all, you do not have customers calling your neighbor for you, why have them email your ISP (e.g. yourName@yourISP.net).

While this solution won't have the internet working to get you new customers, setting customer expectations or serving customers, it is an extremely inexpensive solution to giving your business card the look of a serious professional.

Another type of customer who selects OnRamp, are people just starting out. There is so many extra things that need to get done to get a business off the ground, you have to prioritize your time. What some people do is:

- Register company name (including deciding on the legal structure of the company and any needed trademarks).
- Order Telephone Service so customers can call you.
- Order OnRamp to get the domain name and email address squared away.
- Order Business Cards - because you need a telephone number and email address first.
- Now work on all the other things that need to get done to make business happen - especially getting revenue and cash flow moving in the right direction!
- Create the real web site that will be used to get those new customers contacting you, setting expectations, providing quality service to customers without you constantly being on the telephone, etc. Order today
